Watch Reserve — Session Updates Summary

The following changes were completed to the Valuation Link, Sell, and popup modal flows.

1. Logo on the Valuation Link page no longer links home

On the /valuation-link page only, the logo now renders as plain text instead of a link, so clicking it does nothing. Every other page is unaffected.

2. Per-section titles added to the Valuation Link form

Each of the 3 form steps now shows its own heading: "Tell Us About Your Watch," "The Condition of the Watch," and "Tell Us About You."

3. Progress bar repositioned

The "Step X of 3" progress bar now sits inline next to the step title on desktop, and stacks underneath it on mobile, with spacing adjusted so it no longer crowds the first field.

4. Brand dropdown arrow fixed on mobile

Replaced the inconsistent native mobile browser arrow with a custom icon positioned identically on every device, on both the Valuation Link and Sell pages.

5. Valuation Link hero copy updated

The hero paragraph was replaced with new messaging thanking visitors for their interest in the September Free Valuation offer.

6. "September Free Valuation Offer" hidden on mobile navbar

On the Valuation Link page at mobile widths, the offer text next to the logo is now hidden entirely instead of shrinking, since it was crowding the logo.

7. Rolex-specific Model dropdown

Selecting "Rolex" as the Brand now swaps the free-text Model field for a dropdown of Rolex model names, on both the Valuation Link and Sell pages. Changing the Brand clears the Model value so a stale entry can't carry over.

8. Primary button color matched to the Contact page

The Continue/Submit button color was changed from deep maroon to the same gold used on the Contact page's submit button, on both the Valuation Link and Sell pages.

9. Confirmed: Preferred Contact Method has no validation issue

Verified the form already submits fine with no contact method selected. No fix was needed.

10. "Ask Me Later" slide-in rebuilt into its own capture form

The slide-in reminder on the Sell page no longer links out to the main form. It now shows its own short Name + Email form immediately, submits directly, and displays a confirmation message. The

backend now tags these leads separately from the standard popup so staff can tell them apart.

11. "Ask Me Later" reminder copy shortened

Updated the reminder text to be shorter and clearer, changing "two minutes" to "30 seconds."

12. Popup modal sized larger on mobile

The popup modal now uses a larger footprint on mobile screens than before.

13. Popup modal made more compact on mobile

Adjusted header padding, title/subtitle sizing, and spacing so the full popup stack fits on a mobile screen without scrolling, while keeping enough breathing room between sections.

14. Analytics tracking added for the "Ask Me Later" reminder form

Added event tracking for successful submissions of the reminder form. Confirmed the popup's own "Ask Me Later" click and its own submission were already tracked correctly.

15. Popup Modal Pipeline documentation created

Created an internal reference document covering the two-stage funnel strategy, the popup's trigger and offer framing, the "Ask Me Later" path, a planned send-time split test, recommendations for future testing, an analytics instrumentation table, and flagged gaps for follow-up.
