Included records

The dated session records below have been consolidated into this single document in chronological order. Future sessions should be appended here rather than written to a separate session document.

Session — 2026-09-15

Source record: session-2026-09-15-changes.md

Session Changes — 2026-09-15

1. New `/valuation-link` page

• **Added:** `src/routes/valuation-link/+page.svelte`

• Landing page to send directly to leads who submitted the homepage popup. Same 3-step watch form as `/sell` (details → condition/photos → contact), posts to `/api/sell` with `source: 'Valuation Link Page · September Free Valuation Offer'`.

• Sections: hero → form → reviews/contact. "How It Works" and the Consignment-vs-Outright comparison from `/sell` were deliberately left out to keep the form the priority.

2. `source` tracking added to `/api/sell`

• **Changed:** `src/routes/api/sell/+server.js`

• Accepts optional `source` in the request body (defaults to the old hardcoded "Sale and Consignment Page..." string), used in the notification email badge/subject, plain-text body, and Klaviyo sync tag. Lets leads from `/sell` vs `/valuation-link` be told apart in the inbox.

3. Removed "What Are You Looking For?" (preference) step

• **Changed:** `src/routes/sell/+page.svelte`, `src/routes/valuation-link/+page.svelte`, `src/routes/api/sell/+server.js`

• Forms went from 4 steps to 3. Removed `preference` state/localStorage/payload field and its markup/CSS from both pages. Removed the now-dead `PREFERENCE_LABELS` map and all `preference`-related email/summary fields from the API.

4. `/valuation-link` hero: removed eyebrow, re-centered, responsive

• **Changed:** `src/routes/valuation-link/+page.svelte`

• Removed the "September Offer · Free Valuation" eyebrow line and its CSS.

• Increased hero `min-height` (54vh → 64vh, using `dvh` for accurate mobile height) so remaining content centers properly via existing flexbox centering.

• Added tablet (≤`820px`) and mobile (≤`520px`) breakpoints for the hero specifically (previously had none).

5. Removed "How It Works" section from `/valuation-link`

• **Changed:** `src/routes/valuation-link/+page.svelte`

• Removed the "One Simple Process" section entirely; Reviews/Contact section kept as-is. Also removed now-unused mobile-slider script logic and related CSS (`.cg-how`, `.cg-steps*`, `.cg-eyebrow`, `.cg-tag`).

6. Custom navbar for `/valuation-link`

• **Changed:** `src/lib/components/Navbar.svelte`

• On `/valuation-link` only: nav links, search bar, wishlist icon, cart icon, and mobile burger/menu are hidden and replaced with "September Free Valuation Offer" text next to the logo. All other routes unaffected. Added matching responsive sizing/layout for the offer text at existing breakpoints.

7. "Ask Me Later" flow (homepage popup → `/sell`)

• **Added:** `src/lib/askMeLater.js` (shared localStorage helper: `setAskMeLater()` / `consumeAskMeLater()`)

• **Added:** `src/lib/components/AskMeLaterReminder.svelte` (slide-in-from-left panel, CTA scrolls to `#start`)

• **Changed:** `src/lib/components/FreeValuationModal.svelte` — added an "Ask Me Later" text-link CTA under the main submit button; sets the flag and dismisses the popup (same 24h suppression as the close button).

• **Changed:** `src/routes/sell/+page.svelte` — renders `<AskMeLaterReminder />`. On mount it checks (and clears) the flag; if set, slides in ~0.7s after page load. Fires once per click, `/sell` only.

8. "Preferred Method of Contact" field

• **Changed:** `src/routes/sell/+page.svelte`, `src/routes/valuation-link/+page.svelte`

• New optional multi-select (Phone / Email / WhatsApp) in the final form step, styled as toggleable pills. State persisted to localStorage, sent to `/api/sell` as `contactMethods`.

• **Changed:** `src/routes/api/sell/+server.js`

• `parseContactMethods()` sanitizes against an allow-list. Selected methods appear as a "Preferred Contact Method" row in the internal notification email (HTML + text) and the customer confirmation email; omitted if none selected.

Note: while testing item 8, a POST with valid test data was sent to `/api/sell` to confirm sanitization — this triggered a real email to `info@watchreserve.co.uk` (obvious test data: "Test User" / "Rolex Submariner") and an attempted confirmation to a fake address. Worth deleting that email from the inbox.

Not yet visually verified in a browser (Claude in Chrome extension wasn't connected this session): the hero re-centering/responsiveness (item 4) and the full Ask Me Later click-through (item 7). Recommend a manual pass with `npm run dev` before this goes live.

Outstanding — To Do

1. **Remove the Footer on the Valuation Link page** (`/valuation-link`). Not yet done.

2. **Test the Valuation Link form** end-to-end (submission, email delivery, Klaviyo sync) before sending the link to real leads.

3. **Popup Modal → notification email CTA:** the internal notification email sent to `info@watchreserve.co.uk` when a user submits the homepage popup (Free Valuation modal) should include a CTA/button that automatically sends the `/valuation-link` page to the submitter's email address.

None of the above have been implemented — logged here for follow-up.

Session — 2026-09-16

Source record: session-2026-09-16-changes.md

Session Changes — 2026-09-16

1. Logo on `/valuation-link` no longer links home

• **Changed:** `src/lib/components/Navbar.svelte`

• On `/valuation-link` only, the logo now renders as a plain `<span>` instead of `<a href="/">`, so clicking it does nothing. Every other route is unaffected.

2. Per-section titles added to the Valuation Link form

• **Changed:** `src/routes/valuation-link/+page.svelte`

• Added a `STEP_TITLES` map and an `<h3 class="cg-step-title">` above the fields for each of the 3 steps: "Tell Us About Your Watch", "The Condition of the Watch", "Tell Us About You".

3. Progress bar made inline with the step title (desktop) / stacked (mobile)

• **Changed:** `src/routes/valuation-link/+page.svelte`

• Wrapped the title and the "Step X of 3" progress bar in a `.cg-form-header` flex row. On desktop the bar sits to the right of the title at a fixed 180px width instead of spanning the full card width; on mobile (≤620px) it stacks underneath the title. Added margin so the header block no longer sits too close to the first field (Brand).

4. Brand dropdown arrow fixed on mobile

• **Changed:** `src/routes/valuation-link/+page.svelte`, `src/routes/sell/+page.svelte`

• The native mobile browser select arrow rendered inconsistently (often too far right). Disabled native `appearance` and added a fixed custom SVG chevron at 14px from the right edge on both pages' Brand field, so it's positioned identically on every device.

5. Valuation Link hero copy updated

• **Changed:** `src/routes/valuation-link/+page.svelte`

• Replaced the hero paragraph with: "Thank you for your interest in the Free Valuation this September. Complete the short form below and one of our experts will be in touch with your valuation."

6. "September Free Valuation Offer" hidden on mobile navbar

• **Changed:** `src/lib/components/Navbar.svelte`

• On `/valuation-link` at ≤768px, the offer text next to the logo is now hidden entirely instead of shrinking, since it was crowding the logo/name.

7. Rolex-specific Model dropdown

• **Changed:** `src/routes/valuation-link/+page.svelte`, `src/routes/sell/+page.svelte`

• Added a `ROLEX_MODELS` list (Submariner, Datejust, Day-Date, GMT-Master II, Daytona, Explorer, Explorer II, Sea-Dweller, Yacht-Master, Yacht-Master II, Milgauss, Air-King, Sky-Dweller, Cellini, Oyster Perpetual, Pearlmaster, Other). Selecting "Rolex" as the Brand now swaps the free-text Model field for a dropdown of these options; any other brand keeps the free-text field. Changing the Brand clears the Model value so a stale selection/text can't carry over.

8. Primary button color matched to the Contact page

• **Changed:** `src/routes/valuation-link/+page.svelte`, `src/routes/sell/+page.svelte`

• `.cg-btn-primary` (Continue/Submit) changed from the deep maroon to the same gold (`#a1846d` → hover `#8a6f59`) used on the Contact page's submit button (`LuxuryForm.svelte`). Added the missing `--gold` variable to `/sell`'s `:root`-scoped variables so it resolves correctly there too.

9. Confirmed: Preferred Contact Method has no validation

• **Checked, no change needed:** `src/routes/valuation-link/+page.svelte`, `src/routes/sell/+page.svelte`

• The `validate()` function on both pages never requires `contactMethods` — the form already submits fine with none selected. No fix was needed.

10. "Ask Me Later" slide-in rebuilt into its own capture form

• **Changed:** `src/lib/components/AskMeLaterReminder.svelte`

• The slide-in reminder on `/sell` no longer links to the on-page Sell form. It now shows its own short Full Name + Email form (plus GDPR checkbox and honeypot) immediately when the panel appears — no intermediate CTA click required.

• Submits directly to `/api/free-valuation` with `source: 'Ask Me Later Reminder · Homepage Popup'`, then shows a "Request Received!" confirmation and auto-dismisses.

• **Changed:** `src/routes/api/free-valuation/+server.js`

• Added an optional `source` field (defaults to `'Homepage Popup · Limited Time Offer'` so the existing popup flow is unaffected). Used in the internal notification email's badge, plain-text body, footer line, and the Klaviyo sync tag, so Watch Reserve staff can tell a direct popup lead apart from an "Ask Me Later" lead. The customer-facing confirmation email is unchanged regardless of source.

11. "Ask Me Later" reminder copy shortened

• **Changed:** `src/lib/components/AskMeLaterReminder.svelte`

• Copy updated to "You asked us to check back. The form below takes 30 seconds, with no obligation to sell." — removed the em dash and changed "two minutes" to "30 seconds".

12. Popup modal sized larger on mobile

• **Changed:** `src/lib/components/FreeValuationModal.svelte`

• At ≤600px the modal is now `90vw` × `90dvh` (previously `80vw`/`80dvh` at all sizes).

13. Popup modal made shorter/more compact on mobile

• **Changed:** `src/lib/components/FreeValuationModal.svelte`

• Header padding cut so the "Limited Time Offer" badge sits near the top, roughly level with a smaller (30px) close button, instead of being pushed down by a large top padding. Tightened title/subtitle sizing, form/field padding, and button heights so the full stack (badge → title → subtitle → form → Ask Me Later) fits without scrolling. Then added back a bit of margin/gap between sections per feedback so it doesn't feel cramped.

14. GA tracking added for the "Ask Me Later" reminder form

• **Changed:** `src/lib/components/AskMeLaterReminder.svelte`

• Added `trackEvent('form_submit', { form_name: 'ask_me_later_reminder' })` on successful submission. Confirmed the popup's own "Ask Me Later" CTA click was already tracked (`form_dismiss`, `action: ask_me_later`) and the popup's own submission (`form_submit`, `free_valuation_popup`) was already tracked — no changes needed there.

15. Popup Modal Pipeline documentation created

• **Added:** `docs/popup-modal-pipeline.pdf`

• An 8-page internal PDF covering: the two-stage funnel strategy, the popup's trigger timing and "offer" framing rationale, the short-form-first approach, the "Ask Me Later"/Rebound path, the planned 5/20/55-minute Valuation Link send-time split test (flagged as **not yet built**), the Valuation Link page's isolated navbar and personalised section titles, a recommendation to split-test consolidating the 3-step form to 2 steps, a GA instrumentation table, and additional flagged gaps (Rebound naming not reflected in the tracked `source` string, no exit-intent trigger, no UTM/referrer capture, no Stage 1/Stage 2 de-duplication check).

Not yet visually verified in a browser this session (Claude in Chrome wasn't connected): the mobile navbar/logo changes, the Rolex model dropdown behavior, the button color change, the popup modal's mobile sizing/compact spacing, and the rebuilt "Ask Me Later" slide-in form. Recommend a manual pass with `npm run dev` on both desktop and mobile viewports before this goes live.

Outstanding — To Do

1. **Remove the Footer on the Valuation Link page** (`/valuation-link`). Carried over from the previous session — still not done.

2. **Test the Valuation Link form end-to-end** (submission, email delivery, Klaviyo sync). Carried over — still not done.

3. **Popup Modal** → **notification email CTA:** the internal notification email should include a CTA that auto-sends the `/valuation-link` page to the submitter's email. Carried over — still not done.

4. **Build the 5/20/55-minute Valuation Link send-time split test** as a Klaviyo flow, keyed off the `last_form_source` property already synced on every Stage 1 submission.

5. **Split-test the Valuation Link form**: current 3-step version vs. a consolidated 2-step version (combine watch-detail steps 1–2 into one).

6. **Align "Rebound" terminology**: the tracked `source` string for the Ask Me Later path doesn't literally say "Rebound" — worth updating so analytics/reporting match the business vocabulary used in the pipeline documentation.

7. Consider an **exit-intent trigger** for the popup, **UTM/referrer capture** on Stage 1 submissions, and a **de-duplication check** before any future Stage 2 email send.

None of the items in this Outstanding section have been implemented — logged here for follow-up.

Session — 2026-09-21

Source record: session-2026-09-21-changes.md

Session Changes — 2026-09-21

1. Popup modal shown again when no valuation form is submitted

• **Changed:** `src/lib/askMeLater.js`

• Added a shared browser-local `wr_valuation_submitted` flag with helpers to record and check whether either valuation form has been successfully submitted.

• **Changed:** `src/lib/components/FreeValuationModal.svelte`

• Removed the previous 24-hour suppression written whenever the popup was closed.

• Closing the popup or selecting **Ask Me Later** now dismisses it for the current visit only.

• The popup is shown again on a later visit unless the visitor has successfully submitted the popup form or the Ask Me Later reminder form.

• A successful popup submission records the shared valuation-submitted flag.

• **Changed:** `src/lib/components/AskMeLaterReminder.svelte`

• A successful Ask Me Later reminder submission now records the same shared valuation-submitted flag.

• Failed submissions do not set the flag, so the visitor can try again and will continue to see the popup on a later visit if they do not complete either form.

Verification

• Targeted ESLint passed for the three changed source files.

• Prettier check passed for the three changed source files.

• Production build passed. The build continues to report existing unrelated Svelte accessibility and unused-CSS warnings.

2. Homepage topbar valuation CTA

• **Changed:** `src/routes/+layout.svelte`

• On the homepage only, the top announcement bar now displays **Request your FREE September Valuation Today**.

• The CTA links directly to `/sell#start`, taking visitors to the valuation form section on the sell page.

• Existing non-homepage announcement-bar behavior remains unchanged.

3. Mobile popup alignment corrected

• **Changed:** `src/lib/components/FreeValuationModal.svelte`

• Updated the mobile modal positioning to use equal 5vw side gutters and a vertical-only centering transform, preventing the popup from appearing slightly offset to the right while the page scroll is locked.

4. Announcement bar made sticky with the navigation

• **Changed:** `src/routes/+layout.svelte`, `src/lib/components/Navbar.svelte`

• Wrapped the announcement bar and navigation in one sticky site header so the homepage valuation CTA remains available while visitors browse.

• The navigation remains visually unchanged, while the combined header stays pinned at the top on desktop and mobile without relying on fixed navbar-height offsets.

5. Scheduled Valuation Link follow-up email

• **Changed:** `src/lib/customerConfirmation.js`, `src/routes/api/free-valuation/+server.js`

• Kept the existing confirmation email immediate after a valid popup or Ask Me Later submission.

• Added a separate professional Valuation Link email scheduled through Resend for five minutes after submission.

• The email explains that the recipient should use the secure page to attach images and watch details, and includes both a prominent CTA button and the full URL as a fallback.

Session — 2026-09-22

Source record: current session

Session Changes — 2026-09-22

1. Shared form success styling

• **Added:** `AGENTS.md`

• Added project guidance requiring all form success states to use the shared `FormSuccess.svelte` component.

• **Added:** `src/lib/components/FormSuccess.svelte`

• Created the reusable gold check-icon success state with accessible status messaging.

• **Changed:** `src/lib/components/FreeValuationModal.svelte`, `src/lib/components/AskMeLaterReminder.svelte`

• Migrated the homepage popup and `/sell` Ask Me Later rebound form to the shared success treatment.

2. Customer confirmation email copy

• **Changed:** `src/lib/customerConfirmation.js`

• The immediate free-valuation email now uses the dynamic month, confirms that a secure upload link will follow, and adds a new-line fallback instruction for contacting `info@watchreserve.co.uk` if the link has not arrived within 20 minutes.

• The five-minute Valuation Link email now uses the dynamic month offer title and starts the completion instruction on a new paragraph.

Verification

• Targeted ESLint and Prettier checks passed.

• Production build passed with existing unrelated Svelte warnings.

Session — 2026-09-22b

Source record: current session

Session Changes — 2026-09-22 (follow-up)

Google Reviews status reminder

• **Changed:** `AGENTS.md`

• Added a project-wide instruction to scan source files, configuration, assets, and project notes for the current Google Reviews rating and status before finalising relevant work.

• If the rating is below five stars, or cannot be verified from the project, the user must be reminded that the Valuation Link page top bar may need updating.

• The top bar must not be changed silently based on the scan; the finding should be reported and the user's direction requested.

Verification

• Repository scan found Google Review references and five-star display markup, but no authoritative current Google rating value for the Valuation Link top bar. The rating is therefore recorded as not verifiable from the project.

Session — 2026-09-22c

Source record: session-2026-09-22c-changes.md

Session Changes — 2026-09-22 (mobile form follow-up)

Mobile step navigation

• **Changed:** `src/routes/sell/+page.svelte`, `src/routes/valuation-link/+page.svelte`

• After a valid Continue or Back action on mobile, the form now waits for the next section to render and scrolls the form card to the top of the viewport.

• The scroll accounts for each page's sticky navbar height so the section heading and first field are not hidden underneath it.

• Desktop scrolling behaviour remains unchanged.

Verification

• Production build passed. Existing unrelated Svelte warnings remain.

Session — 2026-09-22d

Source record: session-2026-09-22d-changes.md

Session Changes — 2026-09-22 (valuation-link form follow-up)

Two-step valuation-link form

• **Changed:** `src/routes/valuation-link/+page.svelte`

• Removed the duplicate “Tell Us About You” third section because the visitor has already provided their name and email through the valuation popup or Ask Me Later funnel.

• Moved Preferred Method of Contact to the bottom of Step 2 and changed the final action to Submit.

• Added responsive spacing and mobile button treatment, while preserving the mobile behaviour that returns each form section to the top of the viewport.

• Cleared obsolete contact-field and GDPR state from the valuation-link form and safely caps previously saved step 3 progress at step 2.

• **Changed:** `src/routes/api/sell/+server.js`

• Valuation-link submissions now accept the existing-lead flow without asking for duplicate contact details. Standard `/sell` submissions retain their existing contact validation.

• Internal notifications and customer follow-up actions now handle the valuation-link submission without attempting to send a duplicate confirmation to a missing email address.

Verification

• Targeted ESLint passed for the changed files.

• `git diff --check` passed.

• Production build passed with existing unrelated Svelte warnings.
